

PANECOAMBIENTE

WE CREATE AND PRODUCE INNOVATIVE SOLUTIONS,
REDUCING THE IMPACT OF MAN ON THE ENVIRONMENT

COMPANY

PANECO AMBIENTE is a young and dynamic company that boasts over 40 years of virtuous history dedicated with passion and commitment to ecology, the green economy and micro-biodiversity. It is the driving force of a strong and constant commitment dedicated to Research & Development and to the creation of bio-ecological products and systems. Since the early years of its activity, it has considered it essential to dedicate a large part of its human and economic resources to Research & Development, making use of the support of universities and various Italian and foreign research bodies. He thus developed new technologies and explored several new fields of application for those already existing. These researches and this strong commitment have led **PANECO AMBIENTE** to patent dozens of products and production processes.

We work in compliance with the provisions of the **ISO14001: 2015** and **ISO9001: 2015** regulations and we are certified by the accreditation body **Accredia - The Italian Accreditation Body**. We are associated with **Confindustria Cuneo** and registered in the **Register of Environmental Managers**. We are also registered in the **National Research Registry** of the Italian Ministry of University and Research. All activities are carried out in compliance with current workplace safety regulations.

PRODUCT LINES

PANECO AMBIENTE is able to meet the most varied needs thanks to its product lines, all based on the same philosophy.

Reduce the impact of man on the environment, and vice versa, in innovative and biotechnological ways.

The main fields of application are **agro-zootechnics, industry and waste / pollutants, hygiene, underwater world.**

Some lines include products specifically developed for a certain sector of belonging. Others, such as Enzyveba[®], include products that can adapt to different sectors, while following common methods of action.

Enzyveba[®]

humus
An Enzy[®]

EcoCandy[®]

EXTRAFIX[®]

EnzyStrip[®]
Odor Transmutation

ZOLOGIK[®]

AGROZOOTECHNY

Agro-zootechnics was the sector on which PANECO AMBIENTE immediately concentrated its efforts. The products developed since then respond to specific industry needs, without compromises of chemical origin. From humus with a controlled supply chain, through the management systems of pesticide molecules, to deterrence systems for wild animals. This is bioinnovation.

Enzyveba

Enzyveba[®] is the line of products specific for:

- ✓ the intelligent management of treatments in agriculture
- ✓ animal welfare for both breeding and companionship
- ✓ prevention of atmospheric emissions from agro-zootechnics

humus An Enzy

Humus Anenzy[®] is the quality humus line:

- ✓ boasts a production process of 12/15 months, with earthworms
- ✓ produced using manure only from a controlled supply chain
- ✓ also in versions suitable for organic and biodynamic agriculture

ZOLOGIK[®]

Zologik[®] is one of the most recent PANECO AMBIENTE product lines, and allows you to:

- ✓ ensure protection from wild animals in crops and housing, without damaging the crop and keeping people and pets safe

AND OTHER WILDLIFE

CHARACTERISTICS

All our products are developed to be completely eco-sustainable and environmentally friendly.

The lines dedicated to agro-zootechnics are a concrete example of this. This allows the user to use the products in complete safety and tranquility.

In **Enzyveba**[®] the active components are patented complexes of natural origin, the result of decades of R&D.

Humus Anenzy[®] boasts an elite production process. The bovine manure that is part of it, is carefully selected by small and medium-sized enterprises in our production area. In this way you can be sure of the absence of plastics and other pollutants. The large quantities constantly in production allow us to supply all interested parties and maintain competitive prices.

Zologik[®] is composed solely of natural minerals and extracts. It works by providing useful substances to improve the characteristics of the soil and its productivity.

INDUSTRY, WASTE, POLLUTANTS

We are able to offer products and services to optimize the management of waste and pollutants of various types, with particular attention to atmospheric ones.

Our **Enzyveba**[®] and **Enzystrip**[®] lines are able to help you manage in the best way: reduction of pollutants, gaseous emissions, digestion of organic substances, unpleasant odors, microbial proliferation.

Enzyveba[®]

Enzyveba[®] is the line of specific products for:

- ✓ the abatement of atmospheric emissions of various kinds
- ✓ the management of odors and odorants
- ✓ the digestion of organic substances, including pollutants

Enzystrip[®]
Odor Transmutation

Enzystrip[®] is our line of specific products for the smart management of different types of waste, and allows:

- ✓ the abatement and prevention of odors
- ✓ the intelligent management of any leachate
- ✓ stabilization and sanitation of the waste

CHARACTERISTICS

All our products are developed to be completely eco-sustainable and environmentally friendly. This allows the user to use it in complete safety and tranquility. We therefore reach the goal of reducing polluting factors without adding new substances of chemical or non-biodegradable origin. The fields of application are the most diverse, and we offer customized Global Service services for permanent installations. How can they be emission neutralization plants in chimneys and purification plants.

In **Enzyveba**[®] the active components are patented complexes of plant or biological origin (microbial complexes), resulting from decades spent in Research & Development.

Enzystrip[®] is based on mixtures of mineral and vegetable origin, specially designed and produced, capable of performing multiple functions.

HYGIENE

The hygiene line was the natural evolution of some products of the Enzyveba® line. In that case, the goal remains to act mainly on the abatement, treatment and inertization of volatile and odorous molecules. We therefore wanted to develop a line of its own, capable of responding to the needs of removing dirt and sanitizing against pathogenic microorganisms. Keeping our philosophy, we have enhanced already virtuous products with our biotechnologies. Thus obtaining an extremely innovative line that has been very well received by the market, even at a high level.

EXTRAFIX®

Extrafix® is the recent and innovative hygiene line, based on:

- ✓ ingredients of natural, organic, biodynamic origin
- ✓ high biodegradability and complete eco-compatibility
- ✓ high efficiency and ease of use

All of our products are developed to be completely eco-sustainable and environmentally friendly. The goal of the **Extrafix®** line is to give an alternative to the use of detergents and sanitizers of chemical origin. These in fact irreparably damage the natural environments that surround us. With all the following effects on the agricultural level and human health.

CHARACTERISTICS

The **Extrafix®** line includes both sanitizing detergents for environments and surfaces, and cosmetic products (soap and hydroalcoholic gels).

The sanitizing detergents for environments and surfaces have been developed in response to the specific needs of the professional world. They are also available in highly concentrated and affordable format, ideal for the most demanding applications. The active ingredients are represented by natural extracts and/or essential oils. In addition to the sanitizing function, they have the ability to trap and make lightweight particulates less volatile.

This feature makes them perfect for cleaning city streets.

The cosmetic products are all extremely delicate on the skin and the environment. They do not contain chemicals and are based on elite raw materials of natural, organic, biodynamic origin.

SUBMERSED WORLD

The line of products dedicated to the aquatic ecosystem is the conclusion of the important air-land-water trio also represented in the company logo.

The goal of **Ecocandy**[®] initially was to respond to the increasingly frequent requests of agricultural/industrial companies with accumulation tanks affected by excessive algal growth. It then developed to include products to improve the welfare of fish farmed species. Especially in the most delicate phases.

Ecocandy[®]

Ecocandy[®] is the innovative line dedicated to the aquatic ecosystem, and includes products:

- ✓ completely natural and 100% biodegradable
- ✓ easily applicable and adaptable as needed
- ✓ extremely complex and multivalent, therefore able to act without causing sudden upheavals

All of our products are developed to be completely eco-sustainable and environmentally friendly.

The goal of the **Ecocandy**[®] line is to offer an alternative to the use of algacides and substances of chemical origin. In fact, these latter, in addition to being harmful to the environment, are now no longer provided for by recent legislation (copper flakes).

CHARACTERISTICS

The Ecocandy® line includes both products to improve the well-being of the aquatic ecosystem, and algamodulating products.

Our algamodulating products are the only natural alternative to chemical algaecides on the market. They were developed following the increasingly frequent episodes of eutrophication in lakes and ponds. These phenomena consist in the exponential growth of algal organisms, due to a surplus of organic substances, often linked to climate change. The products are available in different formats in order to adapt to different conditions of use.

Ecocandy® products for the well-being of the aquatic ecosystem allow to improve the health of the entire volume of water, without acting directly on the animals raised / present. They are particularly useful for restoring the micro-macro ecological balance through extremely complex and multivalent mechanisms.
