

AAPPCE

Asociación Argentina
de Protección Profesional
de Cultivos Extensivos

**Argentine Association for
the Professional Protection
of Extensive Crops**

AAPPCE

Asociación Argentina de Protección Profesional de Cultivos Extensivos Argentine Association for the Professional Protection of Extensive Crops

It is a non-profit civil organization that brings together private professionals, consultants and researchers from public institutions that provide professional protection services in the main extensive crops.

Its core purpose is the search for **consensus and solutions to common problems in pursuit of sustainable agriculture**. It researches and develops knowledge by generating monitoring protocols, action thresholds and providing professional training in permanent coordination with various entities.

VISION

Encourage the creation of innovative and sustainable solutions by making a rational use of resources in the agricultural field.

MISION

Promote Professional Crop Protection within a sustainable agriculture that allows food security while protecting the environment.

LINES OF WORK

- Encourage the adoption of **Professional Crop Protection Programs**, aligned with policies that promote sustainable production systems, protect the environment and guarantee food security.
- Promote research and development of good crop protection practices to **outline solutions**, improving working methods and decision-making through work agreements with companies, public and / or private institutions.
- **Work as a network providing regional and national** information (based on protocolized data collection systems) on the appearance and dynamics of pests and spread knowledge of the association's own research and development.

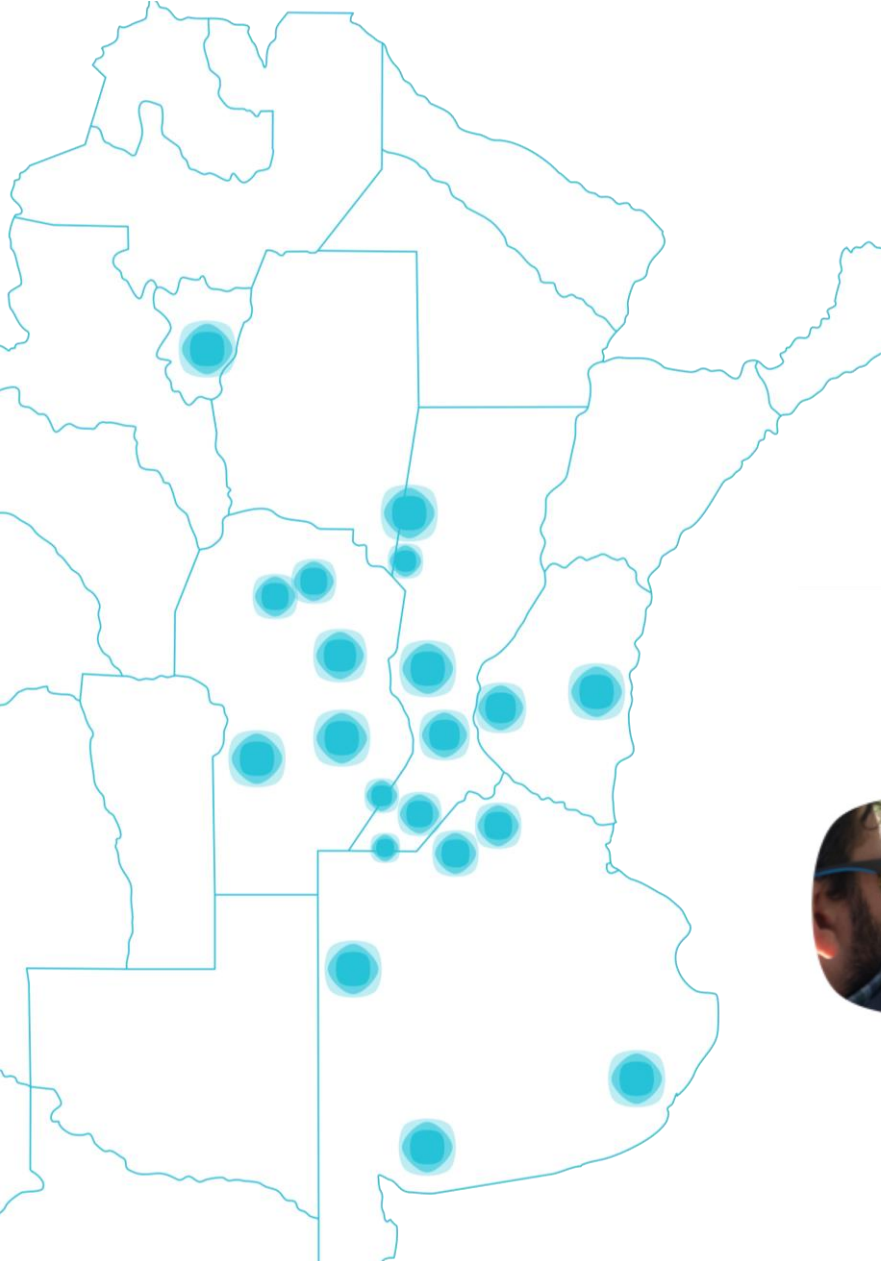

TERRITORIAL SCOPE

The members of AAPPCE are agricultural advisers in the main productive areas.

This regional distribution enables the generation of information on the network under different modalities and objectives.

Data management is carried out in a protocol manner.

CONSOLIDATED NETWORKS

RedMIP
ALERTA NACIONAL

Pest and disease monitoring network

RedTDF
Red de Trampas de Feromonas

Pheromone Trap Network

RESEARCH AND DEVELOPMENT PROGRAMS

CONICET / AAPPCE AGREEMENT

- Development of predictive models for decision-making in the management of stink bugs in soybeans
- Sampling *Spodoptera frugiperda* with pheromone traps

INTA / AAPPCE AGREEMENT

Development of adaptive experimental networks and generation of recommendations for disease management in different extensive crops according to "Good agronomic practices".

ASA / AAPPCE AGREEMENT

Research on aspects associated with the planting of Bt corn

AURAVANT / AAPPCE AGREEMENT

Crop monitoring module developed with AAPPCE protocols

UPL / AAPPCE AGREEMENT

Research on ecosystem services generated in production systems carried out by partners.

MEMBER

Good Agricultural Practices Network

Space for dialogue and consensus with more than 50 public and private institutions in Argentina that develop various activities in relation to Good Agricultural Practices (GAP)
