

Transforming Lives and Landscapes with Regenerative Agroforestry

The Inga Tree Model of
Inga Alley-Cropping

FROM DEVASTATION...

...TO REGENERATION

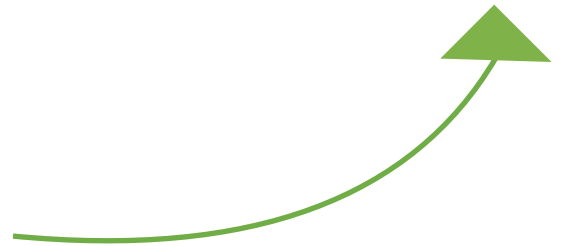

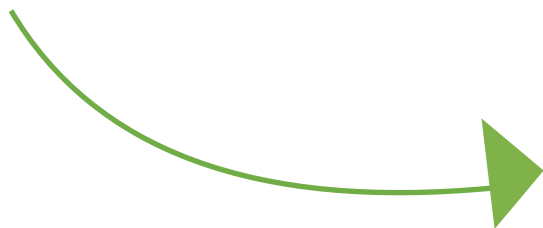

in just 18 months

Inga Foundation's Land for Life Program

est. 2012

- More than 4 million trees planted
- 300+ families lifting themselves out of food-insecurity and poverty
- 450,000 tons of CO₂ sequestered /avoided by the end of 2021

The trees grow quickly

We germinate and grow the seedlings in our nurseries

From mudslides and land erosion to drought, Inga trees with crops survive the worst climate shocks

The Inga Tree Model
fulfills 11 of the 17
United Nations
Sustainable
Development Goals
with

**NO NEGATIVE
IMPACT**

on the remaining 6

Rarely has there been a more simple and replicable model for many of the world's most pressing problems.
