Summary

Boomitra is a leading carbon marketplace working with farmers and landowners worldwide to mitigate climate change through improved agricultural practices. The US-based start-up uses proprietary AI and satellite technology to monitor, report, and verify (MRV) soil organic carbon to a 30cm+ depth, without physical soil sampling, reducing measurement costs by 99%. The process is cost-efficient, time effective, and scalable across various landholding sizes – enabling Boomitra to work globally: 5M+ acres, 150,000+ farmers, 4 continents, millions of credits sold to date. Farmers and landowners earn the vast majority of proceeds from each carbon credit sold, allowing them to re-invest in their farms and local communities.
