City of Buenos Aires, Argentina

Summary

Carbon Group Agro-Climatic Solutions is a consulting firm originally based in the southern cone of South America, and now working globally. Internationally known for its experience in the development and implementation of climate change adaptation and mitigation strategies, and in greenhouse gas (GHG) inventory systems with a special focus and world-class expertise in sequestered carbon in soils, including the development of business models, financial instruments and market mechanisms for a low carbon, circular economy that focuses on nature based solutions in its pursuit of comprehensive sustainable development.

We are developing important projects in the Nature Based Solutions environment avoiding emissions, mitigating emissions and sequestering soil carbon. In all cases generating high quality carbon credits under VCS norms.

Contact us if you would like to participate in these projects, create a project for your company or buy carbon credits from the projects currently under development.

Our Mission

We support to our clients in the development of systems that allow them to face the challenges and requirements of a sustainable, low carbon future incorporating principles of sustainable development and the hallmarks of a circular economy.

We prioritise nature based solutions, which the International Union for Conservation of Nature describes as "actions to protect, sustainably manage, and restore natural or modified ecosystems, that address societal challenges effectively and adaptively, simultaneously providing human well-being and biodiversity benefits." We harness the power of nature based solutions, including through the reduction of atmospheric carbon concentrations through natural processes of sequestration in soils and forests.

What we do

We provide bespoke advice, assistance and technical capacity to global and local, private and public sectors organizations that addresses their specific objectives, including:

1. Addressing sustainable development indicia, with an emphasis on the environmental, economic and social factors exacerbating anthropogenic climate change.
2. Development of support instruments and business models enabling organizations to pursue their objectives of lowering carbon and other emissions and pursuing sustainability, with a special focus on nature based solutions and corresponding portfolios.
3. Creation and management of carbon crediting and carbon offsetting programmes.
4. The development and implementation of MRV systems (Monitoring Reporting and Verification) of GHG emissions, carbon stocks and related dynamics.
5. R&D for the development of production strategies aimed at the adaptation and mitigation of climate change.
6. Support in identifying, prioritizing and pursuing the key elements of an organization's or an economy's path to sustainable development and a circular economy, including the use of agro-industrial and organic waste.

Meet the team

During the indicated periods, one of the team members is available for a video chat.
