We are an NGO located in Mexico that has been specializing in the development of agroforestry systems for different productive industries such as:

- Cattle farming: Silvopasture Systems
- Coffee and cocoa: Multistorey agroforestry systems
- Tobacco: Vetiver System
- Sugar cane

We promote a set of best practices through our different tool boxes, but first of all, we consider that our strategy of scaling agroforestry systems on Keyline design as our first value proposal.

We have been working with industry leaders in the private sector and with public institutions.

Right now we are developing a Network to scale silvopasture systems on the Tuxtlas Biosphere Reserve, which is the northernmost tropical rainforest of the American continent. We are generating data on the improvement of production conditions in ten farms as of 2022 and we expect to scale these interventions in four municipalities over the next three years.

We are also been able to develop the establishment of the Vetiver System on a big scale in the Matacapán Valley, which suffers from great erosion and soil loss. We have been scaling this solution since 2019 with very interesting results.

Please feel free to contact us to talk more about these and other agroecological solutions we are using to produce in balance with nature.
